PROFESSIONAL SUMMARY

Results-driven Java Full Stack Developer with 4+ years of experience architecting and delivering enterprise-grade microservices and modern React.js frontends. Proven track record at top-tier organizations including Wells Fargo and Optum, building high-availability systems processing 500K+ requests/day at 99.9% uptime. Deep expertise in Spring Boot, cloud-native deployments (AWS/Azure), event-driven architecture (Apache Kafka), and enterprise security (JWT/OAuth2). Adept at leading code reviews, mentoring developers, and driving CI/CD automation in fast-paced Agile environments.

TECHNICAL SKILLS

Languages: Java 8/11, JavaScript (ES6+), TypeScript, Python, SQL

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JWT, OAuth2

Frontend: React.js, Redux, Angular, HTML5, CSS3, Bootstrap, Tailwind CSS

Data & Messaging: MySQL, PostgreSQL, MongoDB, Redis (caching), Apache Kafka (event streaming)

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Jenkins, Maven, Gradle, Git

APIs & Testing: RESTful APIs, Swagger/OpenAPI, Postman, JUnit 5, Mockito

Architecture: Microservices, SOLID Principles, Design Patterns, Layered Architecture, Performance Optimization

Practices: Agile/Scrum, CI/CD Automation, Code Reviews, System Design, Application Resiliency

PROFESSIONAL EXPERIENCE

Wells Fargo | Full Stack Developer

Irving, TX | Mar 2025 – Present

- Architected and delivered **12+ production microservices** using Java 11 and Spring Boot, handling **500K+ daily requests** with **99.9% uptime**, serving enterprise banking operations across multiple internal platforms.
- Enforced enterprise security by implementing **JWT and OAuth2** authentication and authorization flows via Spring Security, reducing unauthorized access incidents by **40%** and achieving full compliance with regulatory standards.
- Built responsive **React.js, Redux, and TypeScript** frontend applications improving page load performance by **30%**, enhancing engagement across high-traffic internal banking portals serving thousands of employees.
- Integrated **Apache Kafka** for asynchronous, event-driven communication across microservices, increasing system throughput by **35%** and significantly reducing inter-service API latency under peak load conditions.
- Optimized **MySQL, PostgreSQL, MongoDB, and Redis** performance through strategic indexing, query tuning, and caching layers, cutting average database response times by **25%** across all services.
- Containerized all services using **Docker** and orchestrated deployments on **Kubernetes (AWS & Azure)**; built Jenkins CI/CD pipelines reducing deployment cycle time by **50%** and eliminating manual release errors.
- Led **code reviews and cross-functional collaboration** across engineering teams, improving code maintainability, reducing production defects by **20%**, and onboarding junior developers through structured mentoring programs.
- Implemented **cloud-native monitoring, structured logging, and alerting** strategies ensuring proactive issue detection, rapid incident resolution, and sustained operational stability across all production services.

Optum | Software Engineer

Hyderabad, India | Aug 2020 – Jul 2023

- Developed and maintained **RESTful APIs** using Java, Spring Boot, and Spring MVC for payroll and HR management modules serving **100K+ active users**, ensuring high reliability and zero-downtime deployments.
- Built **responsive frontend components** in React.js and JavaScript (ES6) with HTML5 and CSS3, reducing page load times by **20%** and improving overall UI responsiveness and cross-browser compatibility.
- Optimized **MySQL and PostgreSQL** database operations through advanced query tuning, indexing strategies, and schema redesign, improving database performance by **25%** and reducing application bottlenecks.
- Achieved **80% test code coverage** by writing comprehensive unit and integration tests using JUnit 5 and Mockito, reducing production defects by **30%** and improving overall release quality.
- Streamlined build and **CI/CD pipelines** using Git, Maven, and Jenkins, reducing manual deployment efforts by **40%** and accelerating release cadence across development and staging environments.
- Participated in **sprint planning, code reviews, and production on-call support** in Agile/Scrum environments, consistently resolving critical production issues within SLA timelines and contributing to timely feature delivery.

EDUCATION

Master of Science in Computer Science — University of Central Missouri, Warrensburg, MO December 2024

Relevant Coursework: Advanced Algorithms, Distributed Systems, Cloud Computing, Database Management Systems, Software Engineering, Machine Learning Fundamentals
